PROFESSIONAL SUMMARY

Senior Full Stack Engineer with 4.5+ years building real-time dashboards, operator workflows, and business-critical SaaS products using React.js, Next.js, TypeScript, Node.js, and PostgreSQL. Delivered low-latency APIs, RBAC, audit logs, and performance-optimized interfaces that scaled to 1,000+ concurrent users. Designed and shipped multi-tenant SaaS architecture, RESTful APIs, and mobile applications from scratch, delivering production-ready software engineering solutions on AWS and SAP BTP. Hands-on across Node.js, React.js/ReactJS, TypeScript, Next.js, Express.js, RESTful APIs, PostgreSQL, AWS, Azure, GCP, and CI/CD.

TECHNICAL SKILLS

Frontend: React.js (ReactJS), Next.js (NextJS), TypeScript, React Native, Material UI, Highcharts, responsive UI systems

Backend: Node.js (NodeJS), REST APIs, GraphQL (learning), Express, authentication, SSO, RBAC, middleware, audit logs, PDF export

Databases: MongoDB, MySQL, PostgreSQL · query optimisation, indexing, pagination, high-volume data handling

Cloud & DevOps: AWS S3, Vercel, GitHub CI/CD, Docker (containerisation basics), SAP BTP, multi-instance load balancing

Caching & Infra: Redis (caching concepts), microservices architecture concepts, performance profiling, stress testing

AI & Tooling: LLM API integration, AI-assisted development workflows, prompt engineering, Codex, deployment validation

Languages: JavaScript, TypeScript, Python (academic + personal projects).

Process: GitHub, Jira, code reviews, sprint execution, team leadership (3 engineers), stakeholder communication.

PROFESSIONAL EXPERIENCE

Veritas Prime Labs | Senior Full Stack Developer | Oct 2023 – Mar 2026 Bangalore (Remote)

Enterprise HR tech SaaS integrated with SAP SuccessFactors and SAP BTP. Led a team of 3 engineers.

- Built real-time dashboards and operator workflows using React.js, Next.js, and TypeScript, with reusable components and performance-focused UI optimization for live monitoring and mission-critical product delivery.
- Designed and refactored APIs in Node.js (Express), audit logging, and approval workflows, and optimized SQL queries with PostgreSQL indexing and pagination.
- Deployed and scaled applications on SAP BTP, with experience transferable to Azure services (load balancing, multi-instance scaling, secure integrations).
- Recovered Mass Changes Platform from client escalation — reduced API response time from 10+ minutes to 2–3 seconds, fixed frontend crashes, and scaled concurrent user capacity from ~20 to 1,000+, serving 30,000+ HR/manager users across a 100,000-employee dataset.
- Designed full architecture of Overtime Management Platform: multi-tenant DB connections, SuccessFactors SSO, RBAC, audit flows, and performance-focused API design.
- Led React Native development of Prime Time mobile app: offline/online time tracking, mandatory photo capture with feature flags, AWS S3 image storage, PDF exports, audit logs, and Android/iOS release support.
- Mentored 5+ engineers — reviewed code, resolved blockers, translated product requirements into engineering plans, and coordinated releases with QA, product, and stakeholders.
- Introduced stress testing and performance reporting as a production-readiness standard, identifying bottlenecks in high-frequency UI updates and improving low-latency responsiveness before peak usage windows.

Enterprise dashboard and analytics platform.

- Built reusable React + Material UI component library for enterprise dashboards and internal business workflows, reducing duplicate UI code across modules.
- Implemented interactive data visualization using Highcharts for live operational dashboards, charts, tables, and reporting views, optimizing display of high-frequency data updates.
- Integrated frontend modules with backend APIs; supported QA cycles and production release readiness via GitHub and Jira.

Trustt (formerly Novopay) | Full Stack Web Developer | Aug 2021 – Oct 2022 Bangalore

Fintech / lending product — customer, retailer, and internal support portals.

- Developed customer and retailer portals for real-time status tracking, workflow management, and application visibility using Next.js, React.js, Redux, Strapi, and REST APIs.
- Built internal dashboards and support tools for loan application data, customer operations, and dynamic content workflows.
- Contributed through the full product build-to-launch lifecycle, gaining hands-on fintech workflow and production delivery discipline.

Key Projects

Query Guardian — PostgreSQL Query Performance Monitor | [Github - Query Guardian](#)

- Designed and built an open-core database observability tool that monitors PostgreSQL query performance, detects N+1 patterns, and generates index suggestions — self-hosted via a single docker compose up with no external dependencies.
- Architected a monorepo with a pluggable interface boundary separating the OSS core (core, collector, api, dashboard — Apache-2.0) from a private enterprise package, allowing both tiers to share one UI codebase with capability-flagged features.
- Built a dual-mode collector: direct SQL polling of pg_stat_statements every 30–60 seconds for aggregate stats, and structured log tailing of auto_explain JSON output for per-execution EXPLAIN plans — covering gaps that neither approach handles alone.
- Implemented query fingerprinting, N+1 burst detection (same fingerprint, same session, N calls within a configurable time window), and rule-based index suggestion engine (sequential scans, missing FK indexes, sort without supporting index).
- Designed a least-privilege database role with a self-review setup script, TLS-enforced connections, encrypted DSN storage, and a push-based agent model so the collector never requires inbound firewall rules on the user's infrastructure.
- Defined a full data model across 10 tables covering query identity, time-series snapshots, EXPLAIN plans, N+1 patterns, and index suggestions — with clean separation between target DB, metadata DB, and enterprise-only alerting tables.

P3Kit — AI Interview Preparation Platform | p3kit.arkionlabs.in

- Designed and built a full-stack AI interview preparation platform from scratch — product concept, architecture, development, deployment, and ongoing iteration.
- Core AI workflow: users upload their resume (PDF parsing) and input a target role or job description; the platform calls OpenAI GPT-4 to generate a personalized set of interview questions with detailed model answers, structured by topic and difficulty.
- Feature set: resume upload and PDF parsing, JD/role input, AI question + answer generation, progress tracking, saved sessions, and a structured preparation dashboard — complete end-to-end prep workflow in a single product.
- Tech stack: Next.js, TypeScript, OpenAI API (GPT-4/GPT-3.5), REST API layer, Vercel hosting, GitHub CI/CD, Hostinger DNS configuration, and production routing. Fully deployed and live.
- Demonstrates end-to-end product ownership: prompt engineering for consistent structured AI output, API cost management, error handling for LLM edge cases, and iterative UI improvement based on self-testing and feedback.

Statement — Privacy-First Personal Finance Insights Tool | [Github - Bank Statement Analyser](#)

- Designed and built Ledeqor end-to-end — a full-stack SaaS course platform for applied AI engineering education, covering product architecture, backend APIs, access control, course content, and deployment.
- Tech stack: Next.js 14, TypeScript, MongoDB (Atlas), Auth.js (Google OAuth), Mermaid.js, Vercel, Hostinger DNS, GitHub CI/CD.
- Built a multi-mode learning system across 6 distinct activity types: lecture reader with scroll-spy navigation, flashcards, quizzes, short-answer writing, coding task prompts, and confidence self-rating — all with progress persisted to MongoDB per learner.
- Implemented a server-enforced course access model: Google OAuth authentication, session-based learner IDs, course entitlements, campaign-based Founder Free enrollment (redemption cap, 30-day expiry), and protected API routes returning 401/403 for unauthorised access.
- Built a capstone build tracker for the flagship AI Engineer Guide course — per-phase checklists with named files, API specs, database schemas, and acceptance criteria, with checklist state persisted per learner to MongoDB.
- Flagship course covers 14 applied AI engineering modules: Python for AI, LLM API engineering, document extraction, embeddings, vector search, RAG, SaaS architecture, agentic workflows, evaluation, observability, AI security, and LLMOps — with a B2B SaaS capstone (Arkion DocIntel) as the course thread.

Ledeqor — AI Learning & Career Upgrade Platform | ledeqor.arkionlabs.in

- Designed and built Ledeqor end-to-end — a full-stack SaaS course platform for applied AI engineering education, covering product architecture, backend APIs, access control, course content, and deployment.
- Tech stack: Next.js 14, TypeScript, MongoDB (Atlas), Auth.js (Google OAuth), Mermaid.js, Vercel, Hostinger DNS, GitHub CI/CD.
- Built a multi-mode learning system across 6 distinct activity types: lecture reader with scroll-spy navigation, flashcards, quizzes, short-answer writing, coding task prompts, and confidence self-rating — all with progress persisted to MongoDB per learner.
- Implemented a server-enforced course access model: Google OAuth authentication, session-based learner IDs, course entitlements, campaign-based Founder Free enrollment (redemption cap, 30-day expiry), and protected API routes returning 401/403 for unauthorised access.
- Built a capstone build tracker for the flagship AI Engineer Guide course — per-phase checklists with named files, API specs, database schemas, and acceptance criteria, with checklist state persisted per learner to MongoDB.
- Flagship course covers 14 applied AI engineering modules: Python for AI, LLM API engineering, document extraction, embeddings, vector search, RAG, SaaS architecture, agentic workflows, evaluation, observability, AI security, and LLMOps — with a B2B SaaS capstone (Arkion DocIntel) as the course thread.

Certification

Full Stack Web Development · Newton School (Intensive Bootcamp) | Jan 2021 – Jul 2021

EDUCATION

B.E. (Computer Science) · Technocrats Institute of Technology, Bhopal | 2016 – 2020
